

Lockers

Fully enclosed galvanised steel lockers provide the highest level of security (Class 1). They are the most popular secure parking for cyclists, and the most expensive to install.

Securabike's BSL and BVL lockers are in wide use in rail networks, making them a widely-specified and used locker.

Securabike bicycle lockers are available in both horizontal and vertical models and are manufactured from 1.6mm galvanised sheeting for maximum durability and corrosive resistance (BSL18S and BSL18D). They can also be powder coated in a range of colours. Some models are now available in stainless steel (grade 316) to cater for locations near the seafront where corrosion is a concern.

Horizontal lockers have been designed as a demountable unit and are supplied either as a flat pack or pre-assembled. Flat packs offer substantial freight savings, particularly if being transported to regional or interstate locations. They are supplied in single or the more popular and cost-effective double locker.

Vertical lockers can be manufactured demountable or flatpack in 2, 3 or 4 locker modules which are constructed around a steel frame providing robust, high vandal-resistant security.

Advantages

- Provide the highest level of security – Class 1
- Modular system tailored to suit application
- Single, double or vertical configuration
- Protects bicycle from weather
- Bicycle is hidden from view
- Surveillance not normally required
- Best suited for long term parking
- Individual locking with master keying system

Applications

- Railway stations and bus interchanges
- Park and ride terminals
- Workplaces
- University and college campuses
- Apartments

Standard lockers are supplied with a basic key-operated 3-way locking system suitable for small quantities or where security is not a major issue. Securabike recommends that 'hasp and staple' locking be added where access and security is provided by the cyclist.

Recommended options

HSL

Hasp and staple – allows the cyclist to use their own U locks or padlock

VRTH

Vandal-resistant T handle – spring-loaded handle locates flush when not being used, to minimise vandalism

MKL

Master keying – recommended for multiple locker installations to provide improved locker management and security

MHH

Metal hanging hooks – for helmets and apparel

LVPI

Ventilation panels – provides air movement and also allows inspection to ensure lockers are in use, and being used correctly

Electronic Locking System

Securabike has developed an electronic locking system for its range of lockers, cages and compounds. The system is designed to provide greater utilisation of the lockers while increasing security and minimising management costs.

Management Plan

Securabike's many years' experience in supplying and maintaining bicycle lockers has highlighted the need to develop a management plan to ensure the best possible utilisation of the lockers, what security should be provided and what the cyclist needs to provide. Additionally, Securabike can advise on what service and maintenance needs are required to maximise the life expectancy of the lockers.

Hasp and staple for cyclists to provide their own padlock.

Optional ramp TBL RAMP is mounted on wall for common use.

Material Specifications (General)

TBL185 25 x 25mm RHS / 0.42mm Metal Multiclad Sheeting

BLB632
Mini Locker

10mm hole for scope camera.

Security and Storage.

Provides excellent security by allowing both wheels and the bicycle frame to be secured. Additionally, it allows the cyclist to store riding apparel such as backpack, helmet and gloves. Optional precast concrete slab is available for where the locker is not being installed onto an existing concrete slab.

Most Popular Model

The double bike locker is Securabike's most popular

Optional ventilation panel

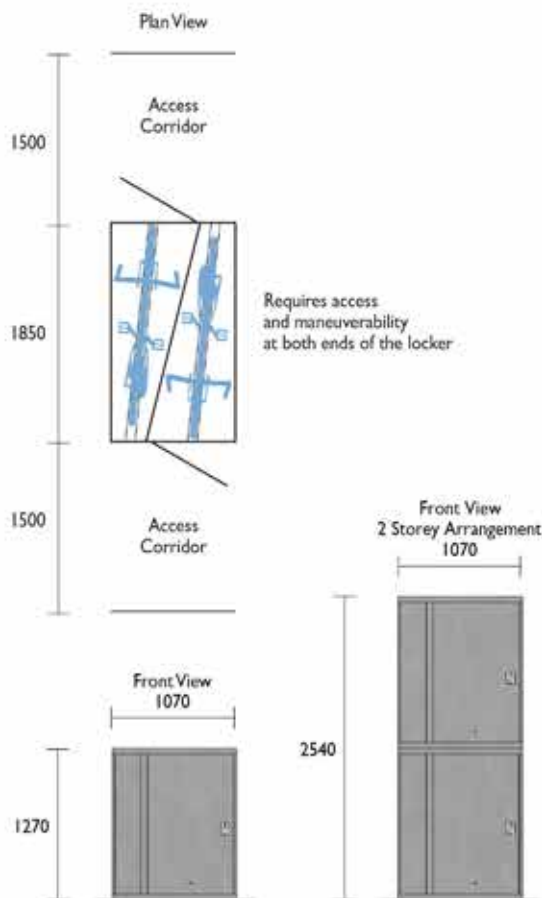

Creased roof panel to provide strength and fall for water run-off (stiffener channel under)

Optional stencil signage

Optional spring-loaded T handle provides improved vandal resistance and allows master keying

3 point door locking system

2 Storey Arrangement showing pull-out wheel guide

Material Specifications (General)

Material 1.6mm metal sheet / powder coated in a range of colours
Inclusions Reinforced door & roof stiffeners, wheel rail, pull-out channel on 2 storey lockers
 Clothes / helmet hooks, 3-way locking, security camera access

BSL18S
Horizontal

Single locker with horizontal storage
Ideal where only single-sided access is available

Creased roof panel to provide strength and fall for water run-off (stiffener channel under)

Optional spring-loaded T handle provides improved vandal resistance and allows master keying

3 point door locking system

10mm hole for scope camera

BVLH1

Vertical locker

The vertical bicycle locker has a smaller footprint than horizontal lockers so best for locations short on space. The bicycle is suspended on an internal wheel hook with an additional hook that can be used for helmets or clothing.

An internal frame is used to strengthen the vertical locker. The door locking system uses a 3 point system for additional security. Multi key systems are optional.

Creased roof panel to provide strength and fall for water run-off (stiffener channel under)

Optional spring-loaded T handle provides improved vandal resistance and allows master keying

3 point door locking system

10mm hole for scope camera
