

C a g e s

Securabike's bicycle cages fall into 2 categories.

- **Multiple rack cages** – cyclists can leave their bicycle in a secured area which is shared with other cyclists. Refer End-of-Journey Facilities
- **Individual storage** – which allows cyclists to maximise the security of their bicycle.

Steel mesh cages provide good visibility and excellent security and are a practical alternative to lockers, particularly where there is a need to cater for large number of cyclists such as apartment and office buildings or railway stations and bus interchanges.

Cages are also ideal in basement locations where fire or sprinkler regulations may prohibit the installation of metal sheet clad lockers.

Ideally, cages should be positioned where they are easily accessible from the street (within 30 metres if possible) and close to showers and change facilities.

Advantages

- Provide Class 2 Security
- Individual cages have unique keying system
- Modular system tailored to suit application
- Only casual surveillance required
- Best suited for medium to long term parking
- A cost effective alternative to fully enclosed lockers.

Applications

- Residential apartment buildings
- Educational facilities
- Railway stations
- Bus interchanges
- Commercial & industrial sites
