

Standard lockers are supplied with a basic key-operated 3-way locking system suitable for small quantities or where security is not a major issue. Securabike recommends that 'hasp and staple' locking be added where access and security is provided by the cyclist.

Recommended options

HSL

Hasp and staple – allows the cyclist to use their own U locks or padlock

VRTH

Vandal-resistant T handle – spring-loaded handle locates flush when not being used, to minimise vandalism

MKL

Master keying – recommended for multiple locker installations to provide improved locker management and security

MHH

Metal hanging hooks – for helmets and apparel

LVPI

Ventilation panels – provides air movement and also allows inspection to ensure lockers are in use, and being used correctly

Electronic Locking System

Securabike has developed an electronic locking system for its range of lockers, cages and compounds. The system is designed to provide greater utilisation of the lockers while increasing security and minimising management costs.

Management Plan

Securabike's many years' experience in supplying and maintaining bicycle lockers has highlighted the need to develop a management plan to ensure the best possible utilisation of the lockers, what security should be provided and what the cyclist needs to provide. Additionally, Securabike can advise on what service and maintenance needs are required to maximise the life expectancy of the lockers.
